He won’t notice a difference, but your bottom line will.

Our process pays off.

The decisions you make now impact your plant’s future profit. So why choose other technologies that could make you a high-cost producer? ICM has designed more efficient plants and technologies than any other company in the industry. Our new Advanced Processing Package™ builds on that expertise by providing plants with the ability to produce PROTOMAX™, a yeast-enriched 50% protein animal feed, while saving millions in combined capital investment and ongoing operational costs. Diversification and cost savings. Make the right choice for long-term success.

THE ROADMAP FOR ETHANOL IS EVOLVING.

Our future requires innovation, adaptability, collaboration – and speed.

The American Coalition for Ethanol (ACE) is committed to demonstrating our unique vision for the future of the ethanol industry. Last year, we launched the Accelerate strategic plan to communicate the opportunities we see ahead and to demonstrate the value of your membership in ACE.

ACE is no stranger to innovation, or evolution. Two years ago, we took the road less traveled and embraced carbon as part of our industry’s future. ACE remains a leader in developing new markets and coalitions – just one reason you can trust our vision for the future.

With your help, we can see what’s beyond the horizon and create new momentum for our industry. Let’s Accelerate demand and value for ethanol together.
